

The Belinda Stronach Foundation

The Belinda Stronach Foundation (TBSF) was founded in March 2008 by The Honourable Belinda Stronach, P.C. The Foundation's Mission is to advance human potential and achievement through individual empowerment and social change by strengthening the capacity of individuals and groups through investments in community-based initiatives.

As it grows, The Belinda Stronach Foundation will continue to build partnerships with individuals, non-governmental organizations, businesses large and small, as well as other foundations who work in Canada and around the world to confront global challenges with innovative solutions.

The foundation is committed to raising \$2 million for breast reconstruction at Toronto General Hospital. For more information visit www.tbsf.ca

Toronto General & Western Hospital

Toronto General & Western Hospital Foundation (TGWHF) raises funds for research, education and the enhancement of patient care at Toronto General Hospital and Toronto Western Hospital as well as for their respective research arms,

Toronto General Research Institute and Toronto Western Research Institute.

Our Vision: To enable global leadership in health.

Our Mission: To raise funds for University Health Network by developing and sustaining strong relationships.

Our donors and volunteers have shown a remarkable spirit of philanthropy in helping us achieve our mission and realize our vision. We thank you for joining our community of supporters. For more information visit www.tgwhf.ca

Breast Cancer Reconstructive Surgery

Over the past several years, the Breast Cancer Reconstructive Surgery Program at Toronto General Hospital has evolved into an industry leader in researching and delivering care to the most complex cases of breast reconstruction surgery and provided tools and specialist expertise to assist patients in moving forward with their lives after their operations.

Surgeons from around the world come to Toronto General Hospital to observe our surgeons who are on the leading edge of breast reconstruction. The Belinda Stronach Chair in Breast Cancer Reconstructive Surgery was established to support the recruitment of a top breast reconstruction specialist who will add capacity to the existing program at Toronto General Hospital, thus providing this procedure to more women in Canada.

Surgical Innovation

A leader in research, University Health Network (UHN) is constantly pushing boundaries by seeking new, innovative ways to treat increasingly complex surgical challenges. The Innovation Fund for Surgical Research provides transformative funding support to research in surgery at UHN – performed at Toronto General Hospital and Toronto Western Hospital. Leading the future of surgical standards is image-guided surgery or Guided Therapeutics (GTx).

GTx technology represents a real-time image guidance tracking system that will be used during surgery to track abnormalities and show the current or 'real-time' images of the patient's anatomy. GTx impacts every field from cardiovascular surgery and cardiology to a variety of major cancer operations including head and neck, breast, thoracic, plastic and general surgery.
